## PROFILE

My name is Khresna Pandu Izzaturrahman, or pandu for short. I am an ultimate year student majoring in computer science at Gadjah Mada University and formerly a Robotic Process Automation Intern at Bank CIMB Niaga. I have a huge interest in data especially computer vision and have done several machine learning projects. I am also an active student on campus, having contributed to more than 10 committees and a former Alumni Liaison on student association. I have a strong desire to become a data scientist in the future.

## EXPERIENCE

**Robotic Process Automation Developer Intern, CIMB Niaga** (Aug 2021 – February 2022)

- Sole developer under the guidance of senior developer responsible for the development of Robotic Automation to automate the operational task using Automation Anywhere.
- Together with the tester perform System Integration Testing, User Acceptance Testing, and Production Acceptance Testing.
- Got an overall 86,67 grade from mentor upon completion of the internship.

**Machine Learning Path Cohort Awardee, Bangkit Academy led by Google, Tokopedia, Gojek, & Traveloka** (Feb 2021 – June 2021)

- Team up with 5 other students to build a capstone project to solve a real-world problem with mentoring from industry expert.
- Learn the key concepts and applications of AI to solve a wide range of ML problems from 6 specialization courses on Coursera to prepare for the TensorFlow Developer Certificate exams.
- Weekly instructor led session for soft skill development and machine learning class from expert in the industry.

## EDUCATION

**Gadjah Mada University** (UGM) | Computer Science *Aug 2018 – May 2022 (Expected)*

Coursework: Artificial Intelligence, Digital Image Processing, Natural Language Processing, Programming I & II, Database, Machine Learning, Artificial Neural Network.

CGPA: 3.52

Organization: Himpunan Mahasiswa Ilmu Komputer — Alumni and Resource Management

## CODING PROJECTS

- **Indonesian Sign Language Recognition using MediaPipe** (2022) – My undergraduate final dissertation project. Consisted of two steps, creating a dataset with MediaPipe framework and creating two machine learning models with scikit-learn. Create a Random Forest and Logistic Regression that can perform the sign language recognition for Sistem Bahasa Isyarat Indonesia (SIBI) using a regular RGB camera. Achieved ~96% accuracy for logistic regression model and ~97% for random forest model.
- **Sign Language Translation** (2021) – Bangkit Capstone Project to translate sign language to text in real time on android device. I'm responsible for architecting machine learning model with EfficientNet as transfer learning and convert the model to TensorFlow lite format. Achieved more than 95% accuracy.
- **Iris Multiclass Classification** (2021) – Coded multiclass classification using logistic regression on Iris dataset without machine learning library. Built two models, with and without regularization. Created using Numpy, Pandas, and matplotlib for visualization.

## CERTIFICATION

- **TensorFlow Developer Certificate, TensorFLow Certificate Program** – Successfully taken exam consisted of building and training a neural network using TensorFlow for Image Classification, Natural Language Processing, and Time Series Problems.
- **Data Scientist with Python track**, **Datacamp** – Learn about data visualization with seaborn, data manipulation with pandas, and statistical inference. Learn supervised, unsupervised, cluster analysis and tree based model with scikit-learn.

## SKILLS

Python, TensorFlow, scikit-learn, MediaPipe, pandas, numpy, seaborn, SQL, Git, Automation Anywhere.
